                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A DEVELOPMENTAL REGULATORY SYSTEM THAT PROVIDES CELLS WITH SPECIFIC POSITIONAL IDENTIFIES ON THE ANTERIOR-POSTERIOR AXIS. BINDS TO THE DNA SEQUENCE 5' AA[AT]TTTAATAC-3'.
SUBCELLULAR LOCATION: NUCLEAR ALTERNATIVE PRODUCTS: 2 ISOFORMS; 1 (SHOWN HERE) AND 2; ARE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: EXPRESSED IN THE DEVELOPING LIMB BUD WHERE IS RESTRICTED TO THE MESENCHYME ALONG THE PROXIMAL-DISTAL AXIS.
ALSO FOUND IN DEVELOPING GUT AND UROGENITAL TRACT. IN ADULT TISSUE, BOTH FORMS FOUND IN KIDNEY BUT ONLY ISOFORM 1 IS EXPRES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SIMILARITY: BELONGS TO THE ABD-B FAMILY OF HOMEOBOX PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DEVELOPMENTAL STAGE: EMBRYONIC EXPRESSION INCREASES FROM DAY TO DAY 12 AND THEN DECLINES TO DAY 15.

CLATHRIN COAT ASSEMBLY PROTEIN AP180 (CLATHRIN COAT ASSOCIATED PROTEIN AP180) (PHOSPHOPROTEIN F1-20) (91 KDA SYNAPTOSOMAL-ASSOCIATED
AP180) (PHOSPHOPROTEIN F1-20) (91 KDA SYNAPTOSOMAL-ASSOCIATED
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 LINK CLATHRIN TO RECEPTORS IN COATED VESICLES. CLATHRIN-ASSOCIATED PROTEIN COMPLEXES ARE COMPONENTS OF THE ADAPTOR COMPLEXES WHICH LINK CLATHRIN TO RECEPTORS IN COATED VESICLES. CLATHRIN-ASSOCIATED PROTEIN COMPLEXES ARE BELIEVED TO INTERACT WITH THE CYTOPLASMIC TAILS OF MEMBRANE PROTEINS, LEADING TO THEIR SELECTION AND CONCENTRATION. BINDING OF AP180 TO CLATHRIN TRISKELIA INDUCES THEIR ASSEMBLY INTO 60-70 NM COATS.

1- SUBCELLULAR LOCATION: COMPONENT OF THE COAT SURROUNDING THE CYTOPLASMIC FACE OF COATED VESICLES IN THE PLASMA MEMBRANE.

1- ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING.

1- TISSUE SPECIFICITY: BRAIN. ASSOCIATED WITH THE SYMAPSES.

1- DEVELOPMENTAL STAGE: DEVELOPMENTALLY REGULATED IN A PATTERN COINCIDENT WITH ACTIVE SYNAPTOGENESIS AND SYNAPTIC MATURATION.

1- DOMAIN: POSSESSES A THREE DOMAIN STRUCTURE: THE N-TERMINAL 300 RESIDUES HARBOR A CLATHRIN BINDING SITE, AN ACIDIC MIDDLE DOMAIN 450 RESIDUES, INTERROUTED BY AN ALA-RICH SEGMENT, AND THE C-TERMINAL DOMAIN (166 RESIDUES).
                                                                                          DOMAIN
